

How Dream Logistics Solved the Vaccine Cooler Storage Crisis

An Urgent Need

Dream Logistics was contacted by a broker needing immediate warehouse space to store vaccine coolers while COVID-19 vaccines were being manufactured. Dream Logistics jumped into action and was able to create last-minute customer logistics solutions to solve this critical need.

Using their resources and logistic connections, Dream Logistics had the warehouse, employees, and equipment ready in **2 days**.

Flexible Solutions

The coolers that were being stored had different sizes, SKUs, and handling requirements. Specialized equipment was brought in to store and transport the coolers safely and efficiently.

Over the 6 months, Dream Logistics stored over 450,000 vaccine coolers.

When the vaccine was released, Dream Logistics coordinated the cooler delivery to match up with the correct vaccine locations.

Overcoming Obstacles

To solve this need, Dream Logistics tripled its warehouse space and hired over 20 employees to serve the volume of coolers.

They work hard to make the impossible possible.

Dream Logistics is your logistics partner and strives to provide a solution that is cost-effective, efficient, and flexible.
